Lexus F-Sport Performance Accessories 009

- Factory Warranty When Installed by Authorized Dealer
 - Engineered to Lexus Factory Specifications
- Forged Alloy Wheels, Brake Upgrades, Suspension

Lexus F Sport Performance Accessories provide enthusiasts with factory engineering, the confidence of an original equipment manufacturer warranty, and the ability to take performance up a level.

The luxury manufacturer launched its signature line of sport performance parts in spring 2008 with accessories for the IS 350 and IS 250 rear-wheel drive (RWD) entry luxury sport sedans. In June 2009, the line expanded to include F Sport parts such as forged alloy wheels, brake upgrades, suspension systems, air intake, exhaust systems and more for the current generation GS luxury sport gas sedans, IS all-wheel drive (AWD), and the IS C convertible coupe models.

F Sport Performance Accessories by Lexus USA are engineered by Toyota Racing Development (TRD). When installed by an authorized dealer, the accessories are fully warranted for 12 months or for the remainder of the new car warranty, whichever is greater. If the F Sport parts are installed by an authorized dealer and the car is out of warranty, or purchased over the counter, the accessories carry a warranty of 12 months or 12,000 miles.

F Sport 18 and 19-inch Forged Alloy Wheels

The F Sport forged alloy wheels, exclusively designed in a dark graphite finish, not only add an aggressive look to the exterior, but help enhance performance through increased strength and decreased weight. The F Sport wheels require the use of spline-drive lug nuts, which are included in the available Wheel Installation Kit.

F Sport Front Brake Upgrade

The Front Brake Upgrade provides a firmer pedal feel and improved fade resistance in repeated severe-duty use. The Brake Upgrade features six-piston fixed calipers and drilled cast-iron rotors with a patented internal-fin design mounted on anodized aluminum hubs. Braided stainless-steel brake lines and low-dust performance brake pads are included, and the upgrade can be used with stock or the F Sport Rear Brake Upgrade.

F Sport Rear Brake Upgrade

Similar in construction to the F Sport Front Brake Upgrade, the Rear Brake Upgrade uses four-piston fixed calipers and drilled cast-iron rotors. Braided stainless-steel brake lines and low-dust performance brake pads are also included. The Rear Brake Upgrade may only be used in conjunction with F Sport Front Brake Upgrade.

F Sport Shock Absorber Set

Developed in cooperation with Bilstein® and available exclusively through the F Sport Performance Accessory program, this shock-absorber set offers sport-tuned suspension dampening without sacrificing ride quality.

F Sport Lowering Spring Set

This feature lowers the vehicle approximately one inch in the front and rear for a more aggressive appearance and a lower center of gravity. The spring set is engineered to deliver lowered ride height without bottoming out or creating a harsh ride. The sets will be specifically configured for each model and can be used with either the stock or F Sport Shock Absorber Set.

F Sport Sway Bar Set

The sway bar set includes larger diameter replacement front-and-rear sway bars that reduce body lean and flatten cornering. Oil-impregnated rubber bushings are also included to replace the original rubber bushings. Each vehicle's sway bar set is specifically configured to achieve the best performance.

F Sport Rear Chassis Member Brace

To help improve chassis stiffness under aggressive driving conditions and provide a more responsive feel during cornering, the F Sport Rear Chassis Member Brace joins key rear-chassis and suspension mounting points through this tubular steel brace

F Sport Performance Exhaust System

This system features all stainless-steel construction with fully polished mufflers and double-wall exhaust tips. In addition to an outstanding appearance, it delivers a powerful, sport-tuned exhaust sound while complying with established sound-level standards and does not affect emissions compliance.

F Sport Performance Air Intake

This low-restriction intake and filter assembly is fully compatible with stock engine controls and is emission legal in all 50 states.

F Sport Carbon Fiber Engine Cover

Constructed from real carbon fiber, this light-weight, durable engine cover provides a high-tech appearance under the hood. This is a direct replacement for the original cover.

F Sport Performance Clutch Set

The F Sport Performance Clutch Set, available for the IS 250 and IS 250C equipped with the manual transmission, increases clamping force approximately 16 percent to handle higher torque capacity and provide improved feel.

F Sport Quick Shifter

Engineered and machined from billet aluminum, the F Sport Quick Shifter for the manual-transmission equipped IS 250 and IS 250C decreases shift throw by approximately 35 percent for quicker and more positive shifting.

F Sport Shift Knob

Constructed from premium leather and genuine carbon fiber, F Sport shift knobs are sporty and offer a comfortable curved shape. The manual knob is weighted to provide a sporty and more controlled feel while shifting. Both knobs are detailed with signature blue stitching and a silver F Sport logo.

F Sport Floor Mats

Made from the same high-quality 18 ounce nylon carpet as the factory mats, the four-piece set is available in black with a silver embroidered "F Sport" logo.

For additional information regarding the F Sport performance accessory line, please see the F Sport Accessories brochure or visit www.F-SPORT.com.
